

DIVISIONI IN COLONNA

1° livello di difficoltà: prendo tutte e due le cifre del dividendo

INIZIO

Metto un buffo cappelletto \frown al **53**
che vuol dire: - Ora considero tutto il
numero **53** -

Conto quante volte l'8 sta nel **53** e
quindi penso alla tabellina dell'8.

Contando per 8 però non incontro il **53**,
ma il **48** che è il numero più vicino al **53**
(ed è più piccolo di **53**). Dico: l'8 nel **53**
ci sta 6 volte. Scrivo 6 nello spazio del
risultato.

Ma 6×8 non fa **53**, bensì **48**, vuol dire
che c'è un resto. $53 - 48 = 5$. Scrivo
r. 5 e dico **53** diviso 8 fa 6 con il resto
di 5.

Se voglio essere ben sicuro posso fare
la strada inversa: $6 \times 8 = 48 + 5 = 53$
come il numero da cui eravamo partiti!
